SUMMARY

Final-year Informatics student with hands-on experience in software development, backend systems, RESTful API integration, system integration, and data-driven applications. Experienced in developing and maintaining applications using Python and Laravel, building responsive monitoring dashboards, integrating system components, and troubleshooting application and deployment issues. Familiar with Agile software development, Docker-based environments, databases, and software testing. Strong problem-solving and analytical skills with a focus on building reliable and maintainable software solutions.

SKILLS

Programming Languages: Go, PHP, JavaScript, TypeScript, Python, SQL, C++
Backend & Frameworks: Laravel, Express.js, Gin, PHP, Node.js
Frontend: React, Next.js, Vue.js, Ionic, HTML, Tailwind CSS
Database & APIs: MySQL, REST APIs, JSON, JWT Authentication, Database Management
Tools & Infrastructure: Git, GitHub, Docker, Linux, Postman, VS Code, Figma, MySQL Workbench, DBeaver, XAMPP, Laragon
Software Engineering: Agile Software Development, SDLC, System Integration, Requirements Analysis, Troubleshooting, Functional Testing, Test Case Preparation

Languages: Indonesian (Native), English (Professional Working Proficiency).

EXPERIENCE

PT Data Center Indonesia Sukses Makmur	Karawang, Indonesia
Web Developer & System Integration Internship	Dec 2025 – May 2026
- Developed data-driven applications using Python and Laravel system integration through RESTful APIs. - Developed responsive monitoring dashboards for real-time system monitoring and performance evaluation within an Agile development environment. - Developed automated data-processing scripts and system maintenance workflows to improve application stability, data consistency, and operational reliability. - Configured Docker environments to replicate application setups across local and staging servers, ensuring consistent deployment and testing. - Troubleshoot application, API, and system-component issues by analyzing data flow and system behavior to identify and resolve implementation problems. - Validated application functionality during development and deployment to ensure implemented features performed according to expected requirements.	

PKBM Bina Sejahtera	Karawang, Indonesia
IT Infrastructure & Lecturer Part-Time	Apr 2023 – Nov 2025
- Maintained computer and network infrastructure, diagnosing and resolving technical issues affecting classroom and operational systems. - Performed preventive maintenance and diagnostic inspections across 10+ computing nodes to identify potential hardware and software issues. - Delivered comprehensive technical instruction in Basic Computer operations, Programming fundamentals, and Networking principles, mentoring 50+ students to enhance their digital literacy and technical skills. - Troubleshoot system and connectivity problems through structured diagnosis and documented technical solutions for users	

EDUCATION

University Buana Perjuangan Karawang	Karawang, Indonesia
Bachelor of Informatics GPA: 3.74/4.00	2023 – Expected 2027
Coursework: Algorithms & Data Structures, Computer Vision, Embedded Systems & Microcontrollers, Robotics & Automation, Real-Time Operating Systems (RTOS), Computer Networking, Object-Oriented Programming (OOP).	

PROJECTS

Akfaza – Holiday Ticket Booking Website

Fullstack Developer

<https://github.com/Nalendr/Akfaza>

- Developed a PHP-based ticket booking web application using PHP, HTML, CSS, and JavaScript.
- Implemented booking workflows and user interactions for the application's core functionality.
- Debugged and tested application features during development to resolve implementation issues and ensure expected system behavior.

AdaKami – Cooperative Management System

Database Developer

https://github.com/Kalvseveryone/Koperasi_19

- Developed a web and mobile cooperative management application using Laravel and Ionic.
- Designed and managed database functionality to support consistent data handling across application components.
- Integrated backend and frontend components to implement cooperative business processes and application functionality.

Portal DC-INDO — Enterprise Datacenter Operations ERP

Fullstack Developer

- Developed an enterprise datacenter operations and facility management ERP using Laravel, MySQL, Bootstrap, REST APIs, and Pusher.
- Designed and implemented relational database structures and multi-level approval workflows for incident reports, Change Request Forms (CRF), HSE safety permits, warehouse assets, and corporate logistics.
- Implemented automated deployments, dynamic PDF report generation, and real-time event notifications to streamline operational processes and support audit compliance.

Autonomous Gas Plume Tracking System

Lead Developer and Robotics Engineer

- Developed and simulated an autonomous navigation system using Python and real-time sensor data.
- Built data-processing logic to analyze sensor inputs and support autonomous system decision-making.
- Tested algorithm behavior through simulation and optimized processing logic to improve system reliability.
